                                                                                                                                                                                                                                                                                                                                      Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                             was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pNPA2 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         USA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pND42 (gil4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA and transformed into
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                USA

/ Nab_host="E. Coli strain XI10-Gold, T1-resistant, F-"  
// Nab_host="E. Coli strain XI10-Gold, T1-resistant, F-"  
// Note="Vector: PWD42nv; Purified genomic DNA from M.  
musculus C57BI_6J (male) was obtained from the Jackson  
Laboratory Mouse DNA Resource  
(http://www.jax.org/resources/documents/dnares/). The DNA  
was hydrodynamically sheared by repeated passage through a  
0.005 inch orifice at constant velocity. The sheared DNA  
was blunt end-repaired with T4 DNA polymerase and T4  
polynucleotide kinase. Adaptor oligonucleotides were  
ligated to the blunt ends in high molar excess. The  
adaptored DNA was purified and size-selected for a 9.5 to  
10.5 kb range using preparative agarose gel  
electrophoresis. Vector DNA was prepared from a derivative  
of pWD42 (gi|4732114|gb|AF129072.1), a copy number  
inducible derivative of plasmid R1. The vector was ligated  
with adaptors complementary to the insert adaptors and  
purified. The sheared, adaptored mouse DNA was annealed to  
adaptored vector DNA, and transformed into  
chemically-competent E. coli XL10-Gold (Stratagene) cells  
and selected for ampicillin resistance."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a chicken C-11 protein which has cell calcification inhibiting activity. The specification also describes a cell calcification inhibiting agent containing c-erg protein (AAY01521). The proteins are used for measuring the calcification of cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans or ossification of spinal (Cell for diagnosing arthritis deformans)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence

The specification also describes a chicken C-11 protein (AAY01520) which has cell calcification inhibiting activity and a cell calcification of a cerg protein. The proteins are used for measuring the calcification of a cell, for diagnosing arthritis deformans or ossification of spinal column ligament.

CC the expression level to an expression of GS is indicative of GCA. Also included are modulating (M2) GA by contacting GC with an agent CC that alters the expression of at least one gene in GS; (2) screening (CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease using the CC chronic) in a tissue, an allergic response in a subject, exposure of a CC subject to a pathogen or sterile inflammatory disease, by detecting the CC level of expression in a sample of the tissue of gene(s) from GS, where CC level of expression of the gene is indicative of inflammation, (A5) an inflammation (especially chronic) or in a tissue, CC (4) treating (M5) an inflammation (especially chronic) or in a tissue, CC an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammation with an agent that modulates the expression of gene(s) from GS in the tissue, M1 is useful for detecting GCA; M2 is useful for CC cresponse in a subject, exposure of a subject to a pathogen or sterile inflammation (especially chronic) or in a tissue, M1 is useful for detecting GCA; M2 is useful for CC detecting an inflammation (especially chronic) in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, (e.g. psoriasis, rheumatoid arthritis, CC detecting an inflammation (especially chronic) in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile conflammatory disease, also bacterial infection, viral infection, creperfusion injury, renal creperfusion injur
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 DNA
